

# Virsec for Insurance

Insurance organizations must navigate regulatory and compliance issues while also adjusting to meet their subscribers where they are—which increases their attack surface. As services go online, ransomware can exploit systems and be detrimental for insurance organizations due to the sensitive nature of the data they handle. Organizations need to know they can interact with clients online, safely.

Virsec’s breakthrough technology determines exactly what your software is supposed to do and immediately stops it from doing what it should not – preventing ransomware and breaches before they happen.

## Protection for the insurance industry that offers complete coverage

### Better Protection

Prevent attacks before they happen, with no latency or dwell time.

### Stop Ransomware

Eliminate ransomware that exploits vulnerabilities – known and unknown.

### Continual Compliance

Exceed compliance requirements with a compensating control that outperforms security tools that rely on machine learning and AI and get bypassed.

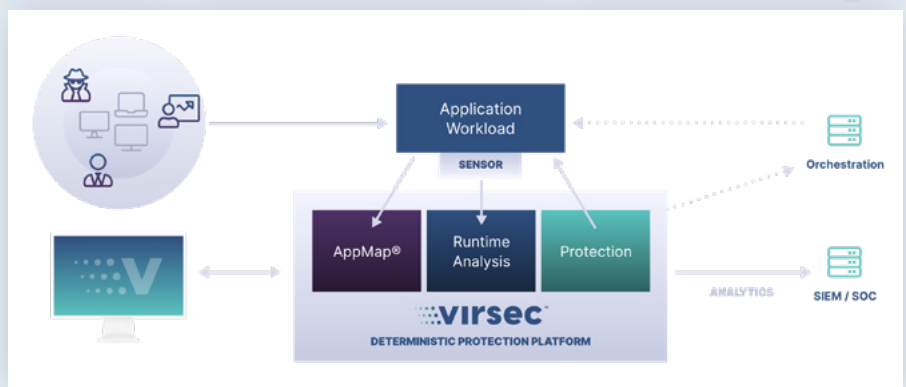

### Reduce Your Attack Surface

Minimize the attack surface where malicious actors could take advantage of digital avenues subscribers use regularly.

## Virsec Deterministic Protection Platform (DPP)

*Deterministic protection that safeguards insurance organizations*

The Virsec Deterministic Protection Platform instantly detects and stops attacks that can corrupt applications before they compromise data or insurance services. Full protection with no learning, updates, signatures, tuning, noise, or performance impact.

## About Virsec

Virsec is on a mission to make security response obsolete. Taking a First Principles approach to protection, the Deterministic Protection Platform (DPP) by Virsec automatically and consistently maps exactly what your software is supposed to do and stops, in milliseconds, any deviations - preventing attackers from leveraging vulnerabilities to execute control and run malicious code. DPP is a proven technology that enables leading government and commercial organizations around the world to protect their server workloads, at runtime, against ransomware and other known and unknown threats, reduce operating costs and meet key compliance requirements. Virsec is headquartered in San Jose, California, with offices all over the world. For more information, please visit <https://www.virsec.com>
