Virsec for
Retail

According to the Verizon 2021 Data Breach Investigations Report, the retail industry continues to be a target for financially motivated cybercriminals. Lucrative ransomware attacks have made all retailers, large and small, possible targets. Protecting against cross-site scripting concerns, API protection to maintain the integrity of transactions, and file integrity monitoring are all important for eCommerce.

In addition to protecting against online attacks, today retailers need to also protect their physical locations and threats to their on-prem local servers as well.

Virsec's breakthrough technology determines exactly what your software is intended to do and immediately stops it from doing what it should not – preventing malware and breaches before they happen.

Protection that Secures Consumers
Wherever They Are

Malware Protection

Eliminate disruptive malware and remediation processes that threaten your bottom line.

Secure Legacy Applications

Protect exposed legacy systems and securely deliver new online services.

Minimize Third-Party Risk

Eradicate third-party and supply chain risk with a compensating control you can trust.

Continual Compliance

Simplify compliance with evolving retail regulatory standards

Virsec Deterministic Protection Platform (DPP)

Deterministic protection that safeguards retail organizations

Virsec Deterministic Protection Platform instantly detects and stops attacks that can corrupt applications before they compromise data or retail services. Full protection with no learning, updates, signatures, tuning, noise, or performance impact.
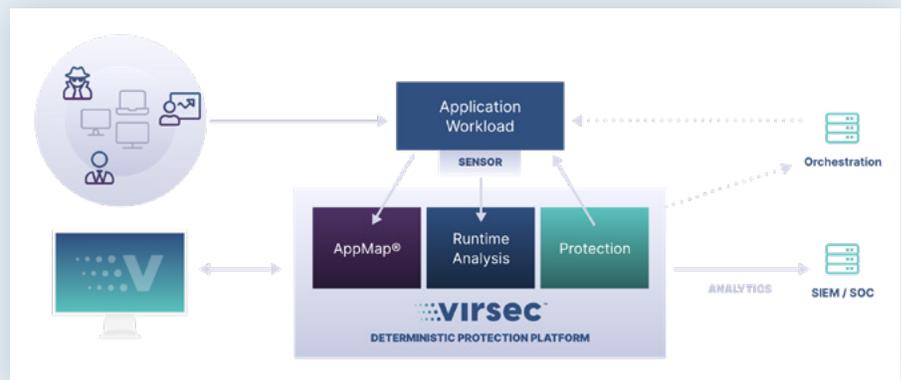

About Virsec

Virsec is on a mission to make security response obsolete. Taking a First Principles approach to protection, the Deterministic Protection Platform (DPP) by Virsec automatically and consistently maps exactly what your software is supposed to do and stops, in milliseconds, any deviations - preventing attackers from leveraging vulnerabilities to execute control and run malicious code. DPP is a proven technology that enables leading government and commercial organizations around the world to protect their server workloads, at runtime, against ransomware and other known and unknown threats, reduce operating costs and meet key compliance requirements. Virsec is headquartered in San Jose, California, with offices all over the world. For more information, please visit https://www.virsec.com
