# EVANGELIST FOR DETERMINISTIC APPROACH TO CYBER PROTECTION

Shauntinez has technical strengths that stem from firmware development for parallel systems and engineering studies, enabling her to understand technology.

**SHAUNTINEZ JAKAB,**  
Senior Director, Virsec.

*With this experience, she has educated sales executives and industry analysts and advised enterprises*

**S**hauntinez helps employees, partners, and industry analysts to understand the level of protection Virsec’s cyber security solutions provide on systems and applications. She acts as an evangelist for Virsec’s deterministic approach to protecting cyber at runtime. She maintains in-depth knowledge of various cyber security solutions and develops product-specific messaging for the company’s different offerings.

Shauntinez has numerous technical strengths that stem from firmware development for parallel systems and engineering studies, enabling her to quickly understand technology, aspects of protected systems, and advanced cyber protection concepts.

She leads by putting the team first, while also enabling and celebrating the success for each individual and efforts to act as a team. She lis-

tens to learn; studies technologies; teaches to share knowledge; and speaks to help others who struggle.

Diversity exposes individuals to different customs, practices, cultures, and approaches that lead to richer perspectives, new ideas, and better approaches to handling situations. Over time, it eliminates barriers and allows people and organisations to grow. With diversity, you often find that the differences in people are only on the surface.

One of her favourite activities is working with Virsec co-founder, whose work in the semiconductor-microprocessor space sparked his idea for the company’s innovative cyber security solution. Learning the new technology and helping others worldwide develop their understanding of the company’s approach to security, while watching knowledge of our technology spread worldwide as the market catches up has been the most rewarding experience of her career.

With this experience, she has educated sales executives and industry analysts and advised some of the largest enterprises. Through her efforts and others, the Virsec Security Platform is considered the most effective solution for protecting legacy systems, the king of workload protection, and the only solution to stop memory-based exploits and attacks.
